

rakon

Same Values, New Look

Rakon has a new look and new logo. Since its inception in 1967, Rakon has advanced, grown and diversified to become a global leader in frequency control solutions. The new look reflects the high-tech company's ethos: pioneering, innovative, dynamic and highly responsive.

World Leading GPS Technology

Rakon are proven leaders in enabling GPS performance and dominate the world supply of high quality GPSTCXOs. The world's leading GPS companies choose Rakon because of their unrivalled application understanding and technical expertise. Since developing the first 0.5ppm TCXO for GPS applications, Rakon is continuing to pioneer next generation frequency control technology, enabling GPS performance in extreme environments.

Diverse Solutions and Markets

Rakon don't just make products, they create focussed solutions and offer a broad product portfolio. From basic quartz crystals, XO's and VCXOs; through to precision TCXOs and OCXOs, Rakon designs and produces solutions capable of delivering accuracies of less than 1ppb. Rakon's specialty products include the RF module; a miniaturised GPS radio frequency front end module (GRM) for use in hand held consumer electronic devices. The module is the smallest worldwide and is a complete 'plug and play' - ensuring virtually no receiver RF design time is required and simplifying bill of material purchasing requirements.

Rakon's GPS markets include consumer GPS, mobile phones, locator

beacons, surveying, agriculture, communications infrastructure, military and aerospace.

Rakon World-wide

Applications engineering support is available globally. Offices are located in the USA, NZ, England, France, China, Taiwan, Germany, and Japan. Manufacturing sites are located in NZ, India, England and France.
