

Telogis

Business Intelligence through GPS Technology

Telogis, the leading global platform for Enterprise Location Based Services, is dedicated to enhancing the value of our customer's business through intelligent integration of location technology, information and services. Telogis powers hundreds of thousands of mobile devices and its software products and services are used and distributed in over 40 countries worldwide.

Telogis Fleet Management Solutions

Telogis fleet management solution helps improve productivity and reduce operating costs through secure, remote access to real-time GPS vehicle and driver information, as well as providing dispatch and route optimization and handheld products for optimum fleet performance. Telogis also provides geospatial software through GeoBase, a sophisticated mapping engine and geospatial platform.

► GeoBase – Leading Geospatial Platform for Mobile Devices

Designed for high transaction environments with a particular focus on speed and scalability, *GeoBase* offers a scalable and stable foundation for building applications that leverage spatial data for geographies around the world.

- GeoBase platform provides a set of programming tools for developing customized applications
- Fast, scalable web-mapping, navigation, geocoding, reverse geocoding and route optimization
- Support for import of custom GIS data for visualization as map layers, routing, geocoding and more...

► OnTrack – Enterprise Grade Fleet Management Application

OnTrack, the Company's GPS-based fleet productivity and management platform is a scalable, easy-to-use, Software as a Service ("SaaS") solution for fleets.

- Rich, web-based tracking interface
- Suite of reports and exceptions
- Engine diagnostics
- Emergency dispatch by type of vehicle or driver skill
- Identify fuel-efficient routes and the drive-time ramifications
- C-Level dashboard to manage 10,000+ unit deployments

► WorkForce – Mobile Approach to GPS Fleet Management

Workforce is a wireless location-enabled application that allows businesses of all size to increase regulatory compliance, streamline operations, and improve customer service while eliminating paperwork and manual dispatch functions.

- Streaming Satellite Imagery
- Custom Map Layers
- Instant Messaging
- Navigation with Visual and Audible Directions
- HOS Report
- Place of Interest Navigation with Heavy Truck Attributes
